

Please follow these simple instructions when re-inking your Pre-Inked Stamp. Refill your stamp right away when the impression begins to fade. Always use the appropriate brand ink when refilling your Pre-Inked Stamp. Using an incorrect ink formula can cause permanent damage to your stamp.

Note: Always place a few sheets of scrap paper beneath your stamp while refilling the ink reservoir. The ink used in Pre-Inked Stamps may stain surfaces, skin and clothing. Wash your hands with soap and water to remove ink from skin.

**Step 1.**

Remove the handle of the stamp by grasping the stamp at the top and bottom and pulling firmly. A reasonable amount of force may be required.

**Step 2.**

Add a few drops of ink to each reservoir. We recommend adding 3-4 drops to each reservoir for smaller stamps, and 6-8 drops for larger stamps.

**Step 3.**

Replace the handle and allow the stamp to rest for 20-30 minutes while the ink absorbs.

**Step 4.**

Stamp a few test impressions to revive ink. Repeat the steps above if the impression has not improved after 30 minutes.
