## TIMEbadge

The Expiring TIMEbadge changes colour when a visitor's badge is no longer valid. Each TIMEbadge consists of a specially coated white adhesive FRONTpart and an adhesive BACKpart that is pre-printed with time release ink. Once the FRONTpart is applied to the BACKpart the TIMEbadge is activated. The result is a gradual colour change that signals expiration when completed.

Visitor, Temporary, Vendor, Contractor imprint, half-day, one-week, one-month expiration time-frames ... ask for a **FAST QUOTE**

Adhesive badges should NOT be applied to delicate materials such as corduroy, leather, silk, suede or vinyl.

For example, a One-Day Expiring TIMEbadge issued in the morning will reveal pink bars by late afternoon, and darker bars within 1 day, signaling an unmistakable visual expiration. They are not affected by light, so the expiration process works indoors and outdoors, day or night. Also, once the TIMEbadge is activated, it is impossible to separate the two parts without visibly damaging the badge.
