

Press Button Fountain Roller Unit

Universal's PBFR-31 Press Button Fountain Roller is designed with a self-contained ink reservoir in the handle for efficient production stenciling applications. The refillable reservoir holds 4.2 oz. (125 ml) of ink and the precision valve delivers the ink directly to the surface of the roller with the press of a button. Applying ink to the surface of the roller results in nearly instantaneous response when more ink is needed on the stencil.

The PBFR-31 roller applicators are manufactured from precision machined aluminum components and utilizes o-ring seals for leak proof operation. The entire unit can be completely disassembled if cleaning or repair becomes necessary.

Universal Type P ink is recommended for stenciling on porous surfaces such as corrugated cartons and paper products. Type D Stencil Ink for non-porous stenciling applications can also be used in these roller units but it is only recommended for applications requiring regular daily use.

Universal PBFR-30 Fountain Roller Kits include a PBFR-31 Press Button Fountain Roller and one pint of Black Type P ink. The Type P is a petroleum base pigmented ink formulated for use on cardboard cartons and other porous surfaces. This ink will not dry out in the rollers and provides dense black stencil impressions.

The PBFR-30 Kit contains the roller applicator and 1 pint of Black Type P ink

PBFR-32 Replacement Roller sold separately

Universal PBFR-32 Replacement Rollers are made from the highest quality, firm density neoprene foam which is bonded to solid birch wood cores using solvent resistant epoxy. Our rollers are then precision ground between centers, for perfect concentricity. After prolonged use, a worn roller can be replaced in a matter of seconds to restore the unit to its original operating performance. For best results, it is generally recommended that the PBFR-33 Felt Wick be replaced when new rollers are installed.
