

RIBtype® is an all rubber, ribbed type which is set by pressing it into the corresponding ribbed grooves in an all-rubber base. Shoulders in the ribs act as anchors in preventing "pop-ups" and slipping of the type while in use. RIBtype® type will fit well in any make of ribbed rubber base. It is so engineered that any type, purchased at a later date will always align with previously produced type. RIBtype® type is furnished in different fonts and packaged in boxes containing grooves which serve as a type case. Logotypes can also be ordered to match any rubber type or in other type styles if required. They can be used in the same type holders normally furnished for rubber type. Logotypes are frequently used on production line marking equipment where speed is essential in making changes.

Precision-engineered to hold alignment variation to less than 0.00345".

Packaged in sets with type in plastic grooves to aid storage.

Custom Logotype

To speed up preparation time, any unchanged portions of copy can be obtained in one-piece logotype form (any size). Logotypes are recommended for small type faces, unusual faces, lines containing unusual fractions, signs or symbols, and for trademarks and trade names in distinctive designs.

RIBtype® Industrial Applications

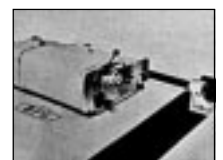

Engineering departments have little difficulty in adapting RIBtype® Logos & Type to production equipment for marking at all practical speeds. Some examples are shown below.
