

STIKA™ ... When You Have Designs on Creativity.

STIKA™ is a graphic design and cutting peripheral that lets you display your creativity practically anywhere. With STIKA™, you can create, produce and cut out original graphic designs for use on virtually anything - models, handicrafts, areas in the home, school books, binders, lunch boxes, toys, athletic equipment, you name it.

And STIKA™ is simplicity itself to use. Just create your pattern data on your PC. Insert a vinyl sheet into STIKA™, and have it cut out your pattern. Remove the unwanted vinyl. Then apply the decal anywhere you wish. Vinyl sheets are available in red, green, blue, yellow, white, burgundy, dark blue, brown, orange, or black along with the cutting blade and the blade holder.

What's more, no additional hardware or software is required. Simply connect STIKA™ to your PC parallel port. Cut designs directly from CorelDRAW! or create original designs using Signmate software for Windows® 95/98, a full-featured lettering and graphics program that includes an easy-to-use cutting application.

All of this creative design and production capability is packed into a compact, portable unit, yet STIKA™ can produce graphics over nine inches wide and more than thirty-nine inches long, with a maximum media capacity of 9¹³/₁₆" x 39⁵/₁₆". Which means that, even when you're on the go, full-size graphics can go right along with you.

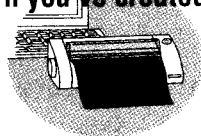

STIKA™ ... the computer peripheral for the graphically inclined.

Stick it up! The STIKA package includes an easy-to-use cutting application and drivers for Windows® 95 and Windows® 98.

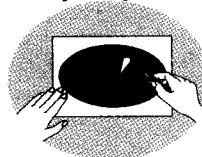

1. Create pattern data on your PC.

2. Insert a vinyl sheet into the STIKA and have it cut out the pattern you've created.

3. Remove unwanted areas around your pattern.

4. Apply the design anywhere you like.
