EM-116 (11"x4") \$27.80
EM-116P* (11"x4") 49.80

EM-117 (9"x11") \$45.80
EM-117P* (9"x11") 89.80

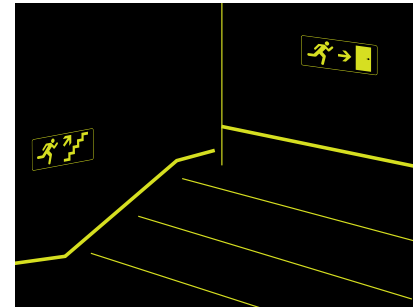

The basic element of fire safety demands the provision of an adequate means of escape from all premises. This includes the clear indication of escape routes and exit doors. Toronto

Stamp's range of emergency way and exit signs allows you to meet these requirements and ensure speed of evacuation of your building in the event of an emergency.

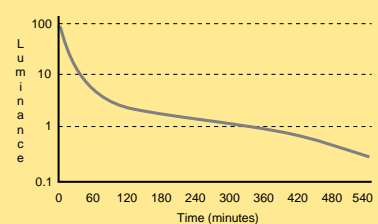

* Photoluminescent Signs

In a situation where low visibility can cause disorientation and induce panic, Toronto Stamp's Photoluminescent Signs will aid in safe and speedy evacuation. Even when all light sources have been extinguished, these signs continue to glow in the dark giving directional and safety information.

Photoluminescent technology utilizes zinc-sulfide crystals, a substance that is inert, non-toxic and free of radioactivity. These crystals absorb light energy, then release this stored energy in darkness over a long period of time. Even though the luminous output declines with time, Photoluminescent Signs remain visible as your eyes adjust to the darkness at a faster rate, making the photoluminescent signs clearly detectable for up to eight hours. Within 20 minutes, the Photoluminescent Sign will "recharge" itself when exposed to daylight or artificial light.

Luminescence vs. Time

For complete specifications, ask for Spec Document 1102.
