

NEXUS® is a Modular Sign System ... modular in that it is composed of standardized components for easy assembly and changeability ... a system in that these same standard components form a comprehensive and unified look. And yet, NEXUS® allows the designer unprecedented freedom to create original and unique sign projects.

NEXUS® combines extruded aluminum FacePlates and Caps, Rails or Frames into a system of directories, wall, door, projecting, suspended, desk or counter signs. The Faceplates are available in 13 brushed aluminum finishes in sizes from 3/4" (20mm) to 24" (600mm) in 5mm increments. Graphics are supplied as computer-cut vinyl, engraved or tactile.

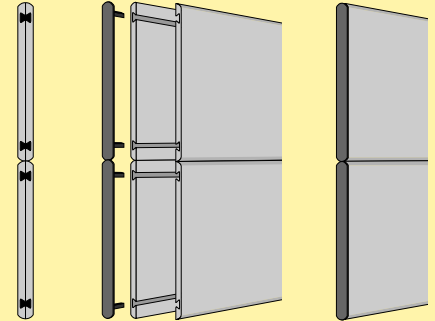

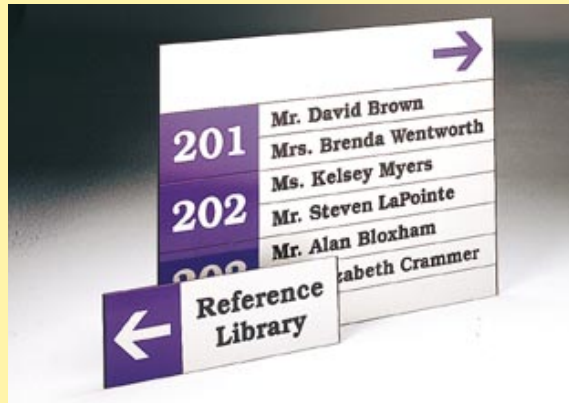

### The Cap Look

The Cap Look offers precision molded end caps in black or silver to perfectly finish off the ends of the faceplates.

**Profile:** 6mm (1/4") thick

**Options:** Insert, Slider, Suspended, Projecting, Desk, Counter.

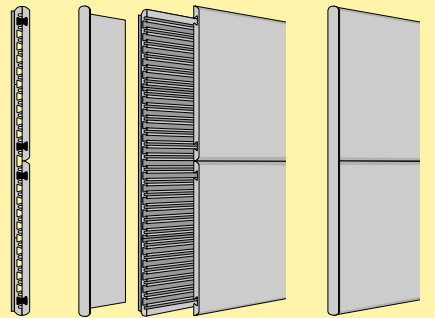

### The Rail Look

Taking the Cap Look to greater heights is the Rail Look. A single rail, the length of the sign, replaces the individual caps. The edge of the sign takes on a cleaner appearance.

**Profile:** 7mm (5/16") thick

**Options:** Insert, Accent, Slider, Suspended, Projecting, Desk, Counter.

### The Frame Look

The Frame Look Sign is still in keeping with the Nexus® silhouette ... ultra thin. The frame comes with square corners.

**Profile:** 15mm (9/16") thick

**Options:** Insert, Slider, Accent.
